

PauseAndFlourish Guide: Active Menopause

Welcome to your personalized guide for **Active Menopause**.

What to Expect

You are approaching or have reached the official menopause milestone (12 consecutive months without a period). Your body is completing its hormonal transition, and estrogen levels are settling at a new, lower baseline.

Common Symptoms

- Cessation of menstrual cycles
- Continued hot flashes and night sweats
- Vaginal dryness and changes in intimate comfort
- Skin thinning and dryness
- Changes in body composition

Top Product Categories to Consider

1. **Vaginal Health and Moisture** Hyaluronic acid moisturizers, soothing vulva balms, and pelvic floor tools can significantly improve daily comfort and intimacy.
2. **Skin and Hair Support** Collagen peptides, targeted menopause skincare (e.g., with peptides or retinol), and biotin can support skin elasticity and hair health.
3. **Comprehensive Symptom Relief** Continue using high-quality multi-symptom supplements if hot flashes and mood changes persist.
